The Present sequence is of the Alcolidenes aquamarins cotainse-64CA2 gene. Programmer of the spence and be used to identify related sequences. Catainse-64CA2 may be used to catalyse oxidation reactions such as epoxidation or hydroxylation. The enzyme can also be used to detect or destroy hydrogen peroxide, e.g. in connection with glyoxylic acid production. Nonemores connectic less cleaning puppages to pleaching and partentisation of dary products. Antibodies raised against characterisation of dary products. Antibodies raised against characterisation of deals containing the enzyme.
                                                                              New bacterial catalases, related nucleic acid vectors and transformed cells - used as oxidising agents and for detecting destroying hydrogen peroxide, e.g. in blosensors
                                                                                                                                                                     English
                                                                                                                                                                     Fig 1; 35pp;

```
This invention relates to the DNA and protein sequences of a novel contribute catalase polypetide. The protein of the invention of its noncious is useful for catalysing the protein of the invention of its noncious is useful for catalysing the breakdown of hydrogen percentage in the protein sequence of the invention is useful for medifying analial molecules. The protein of the invention is analial molecule. The protein of the invention is also useful for catalysing blochemical reactions, for hydrolysing contributed in the protein of the invention is also useful for catalysing blochemical reactions, for hydrolysing specifically to the protein. The nucleace acid sequences of the protein of

Determining the ability of a compound to remove a reactive oxygen species (ROS), useful in pharmaceutical and nutraceutical Itelds ameasuring activities of antioxidants, comprises providing a cell having ROS-inducible promoter

Disclosure; Page 56-63; 70pp; English

ò g g à ద à

The present sequence encodes Agrobacterium tumefaciens catalase (KatA). KatA has a promoter which is induced by a reactive oxygen species (ROS). The KatA gene can be used in the method of the invention. The specification describes method for determining the ability of a compound to remove a ROS. The method comprises providing a cell having a ROS-inducible promoter operably linked to a reporter gene that is heterologous to the promoter, and exposing the cell to a compound protentially able to remove the ROS. The method is useful in determining the ability of a compound or gene product to remove a ROS and determining the lovel of the ROS HOZ inside a cell, to properly assess and label anticidant products for uses as ROS supplements, natural products or drugs. The method may also be used in selecting for new or improved ROS drugs. scavengers

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The Present sequence is of the Microsculla furvascens cotalises-530Al gene. Programmers of the gene can be used to identify related sequences. Outsides-530Al may be used to catalyse oxidation reactions such as epoxidation or hydroxylation. The empressmen can also be used to detect or proxidation or hydroxylation. The empressmen can also be used to detect or production insertion with glyosyllo acid production processing the proxided and pasternism of dairy products. Antibodies raised against catalises 530Al can be used to soreen libraries for detection and purification of cells conteaning the enzyme.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     GCCCGCTGACTGGGGGCACTACGGCGGTTTGATGATCCGTATGGCTTGGCACTCCGCTGG

The protein of the invention or its homologue is useful for catalysing the breakdown of hydrogen peroxide. The protein sequence of the invention is useful for modifying amail in molecules, by mixing the protein of the sequence of the invention is useful or modified small molecule. The protein of the invention is also useful for catalysing blochemical reactions, for hydrolysing also also useful for catalysing blochemical reactions, for hydrolysing of prosidic linkages and for generating antibodies which bind specifically to the protein. The nucleic acid sequences of the capture is useful as a probe to determine whether a biological ample, out an organism having the nucleic acid or out as a soil sample, contains an organism having the nucleic acid or cauch as a soil sample, contains an organism having the nucleic acid or capture for invention is useful in immunoffinity chosency repression in a biological sample. The callulase protein of the contains a protein of the protein of the invention is useful in immunoffinity chosency repression in a biological sample. The callulase protein of the contains and regain activity after exposure to temperatures of from chosen and regain activity after exposure to temperatures of from chosen and the present sequence concerns of the contains protein of the forwart of the present sequence concerns of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                é

variation WO9850585-A1.	PF 06-MAY-1998; 98WO-US092885.  XX XX XX AMAY-1997; 97US-0852219.  XX XX YX XX	CC The invention realists to a novel method of detecting wyCobacterium cc tuberculosis. The method comprises amplifying the DNA in the samples to CC generate a detectable amount of amplified DNA comprised actalases cc memorial of the comprises are submitted DNA fragment has a serie to comprise a train #1778 MC kat6 gene sequence. The method optionally comprises determining if the kat6 MN fragment has a serie to comprise a determining if the kat6 MN fragment has a serie to threonine mutation in coden 313 (\$3157 mutation), indicative of an controlline mutation in coden 313 (\$3157 mutation), indicative of an controlline mutation in coden 313 (\$3157 mutation), indicative of an earlied can be used to detect W. tuberculosis in this disease is composed in the best of the ethod can be used to detect MI stands to the ethodical fluids. CC and subsequent treatment depends on identification of the ethodic agent CC MR tuberculosis truth has been used in tuberculosis treatment, but controlline and subsequence is not provided in the specification; it has been cc created by modifying the katg gene sequence given in Fig 7.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This DNA sequence comprises a consensus of the Mycobacterium tuberculosis wild-type kafe (catalabse percaidase) gene. Claimed methods of rapidly identifying strains of M. tuberculosis which are resistent to the tuberculostatic duty isonizatid (INN) are based on the discovery of 4 mutations in the wild-type gene sequence that conform INN resistance and which coincidently result in the addition or deletion of restriction endouchease sites. Primars (see ANT90401-02) are provided for the PCR amplification of the katG gene of a test strain of M. tuberculosis, and future primars (see ANT90403-06) for use in the restriction framement sea manification defined manification described an analysis of the smallfic gene of manification framements.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Determining susceptibility of Mycobacterium tuberculosis strains to isoniazid - by detecting mutation(s) in the catalase-peroxide gene,
                                                                                                                                                                                                                                                                                                                        G to T transversion at base 1457 alters codon 463 from CGG (Argo) to CTG (Leu) leading to isoniald resistance, and eliminates a Ncil-MspI restriction site*
                                                                                                                                                                                                                               A to G transversion at base 1079 alters codon 337 from TAC (Tyr) to TGC (Cys) leading to isoniazid resistance, and
                                                                                                                               G to C transversion at base 1013 alters codon 315 from AGC (Ser) to ACC (Thr) leading to isoniazid resistance, and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          63;

The invention realtes to a novel method of detecting Mycobacterium to the invention realtes to a novel method of detecting Mycobacterium continuerculosis. The method comprises amplifying the DNA in the samples to generate a detectable amount of amplified DNA comprising a catalase.

DE PROVIDE (RIGHO) NA fragment with sequence of bases 904-153 of the PNA tuberculosis strain H378v MC ketG gene sequence. The method optionally contriber comprises determining if the ketG DNA fragment has a serine to threonine mutation in codon 315 (8315T mutation), indicative of an controlled and hydratide (INNI) reselstant Mr tuberculosis strain. The method can be used to detect M. tuberculosis in biological fulids, controlled on be used to detect M. tuberculosis. This disease is a major cause of human morbidity and mortality, and conclusive disposas in the disease treatment depends on identification of the etiologic agent M. tuberculosis. Rim is many of method conclusive disposas in the disposal strains have emerged; the method allows such drug-resistant strains have emerged; the method allows such drug-resistant extrains to be identified. The present sequence represents the wild-type M. tuberculosis kind one of the etiologic agent M. tuberculosis kind one of the conclusive disposation when the defendence represents the wild-type M. tuberculosis kind one of the conclusive disposation when the defendence represents the wild-type many tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         160 AACAAAGATTGGTGGCCGGAAGGGTTGAACCTGGATATTTTGCATCAGCAAGATCGCAAA 219

                                                                                                                                                                                                                                                                                                                                                                                                  This invention relates to a noval method for identifying essential genes for survival or the method comprises aligning the ground relates of mycohetteria species. The method comprises aligning the ground response of a second mycohetterian species of my expense of a second mycohetterian species and selecting a genomic sequence of a second mycohetterian species and selecting a counterpract in other bacterial sequences and that corresponse to conserved in both genomes with no connection from the survival or virilence of mycohetterian species and that corresponds species species from the survival or virilence of mycohetterian for the survival or virilence of mycohetterian for the invention is useful for detecting My. Understalling the trapers and protective mycohetterial diseases, particularly tubervilosis and injury. The present sequence the survival diseases, particularly Mycohetterial consisting the sequence used in the method of the Invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            220 TCAGACCCGATGGATCCGGATTTCAACTACCGTGAAGAAGTACGCAAGCTCGATTTCGAC

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from USPro at segdata.uspto.gov/sequence.html?DocID=6294328B1.
                                     The invention relates to evaluating strain variation within and between different populations of the tuberculosis betreatial partitions. Mycobacterium tuberculosis or related wycobacterium by determining the mucleotide agequence of the first strain at positions in the complete sequence of the genome that correspond to positions that differ in the mucleotide agequences of w. tuberculosis strains CDF 151 (MN1968) and HN78 (MN1968). The method isrundings strains CDF 151 (MN1968) and w. tuberculosis and has valuable application in the fields of tuberculosis and has valuable application to the fields of tuberculosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             2153207 GCTGACCCGATGGGTGCGGCGTTCGACTATGCCGCGGGGGGTCGCGACCATCGACGTTGAC

I sonicotinic each Mycratide; The method involves the use of restriction fragment length polymorphism (RFLP) analysis to determine if a NcII-MSPI restriction site is absent in the DNA of the strain at the codon corresponding to codon 463 for M. tuberculosis AstG gene comsensus sequence (see ANWIJ343). The absence of the site indicates an
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             GCTGACCCGATGGGTGCGGGTTCGACTATGCCGCGGAGGTCGCGACCATCGACGTTGAC

This partial DNA sequence encodes the katG gene from a variant strain of Mycobactrium tuberculosis H3TAV which is used in a novel method to rapidly identify strains of M. tuberculosis which are resistent to isoniazed (INM, also known as isoniconting cald hydrazide). The method involves the use of restriction fragment length polymorphism (FREP) analysis to determine if a NcIr-MspI restriction site is absent in the DNA of the strain at the codon corresponding to codon 463 of a M. tuberculogis watG gene consensus sequence (see MW3143); the absence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             160 AACAAAGATTGGTGGCCGGAAGGGTTGAACCTGGATATTTTGCATCAGCAAGATCGCAAA
